Dear Hiring Manager,

I am writing to apply for the **Data Science intern** position. I want to bring my background in data analysis, automation, and machine learning to your team and contribute with solutions that are practical and valuable.

In my roles at **PwC Argentina** and the **Treasury of The Church of Jesus Christ of Latter-day Saints**, I focused on making work more efficient through data and technology. I built **Power BI dashboards** and used **Python and VBA** to automate reporting, which saved hours of manual work and helped teams make decisions faster. I also created bots and models with **OCR and RPA tools** that reduced repetitive tasks and improved accuracy.

I am currently working on my **Bachelor's in Data Science at Brigham Young University–Idaho** and will graduate in December 2026. Along with my studies, I have completed projects such as detecting **agricultural pests with image classification** and predicting **loan approvals with machine learning models**. These projects show how I like to take concepts and apply them to real problems.

I am interested in this internship because I want to learn from experienced professionals while also contributing with my skills. I believe my mix of academic knowledge and professional experience makes me a strong fit for your program.

Thank you for your time and consideration. I look forward to the chance to talk more about how I can add value to your team.

Sincerely,
Alejo Alegre Bustos
